

Adding Rajan's plants & other graphs – Win & Mac

June 2005

To enable the new graphs to be seen in **ReferenceWorks**, you must first create and then save them. Here are the steps you need to take to add graphs:

- 1)** Do a **search** for anything – cat, dog, whatever – it doesn't matter
- 2)** Click on the **Family graph** icon from the **tool palette** (orange circle)
- 3)** Go to the "**Graph menu**" on the top of the screen. Select "**Design Graph**"
- 4)** From the window that appears, select the icon with the " ? " (third from right)
- 5.** You will see all of the **new graph's** you can make, including Rajan's. Select a graph and click **OK**
- 6.** Rajan's, or other, Graph will appear.
- 7.** Go back to "**Graph menu**", select "**Save Graph**" and click **OK**. The new graph icon will appear at the end of your list of graph icons.
- 8.** Please **do NOT** click "**replace existing icon**" unless you want to replace whatever graph you used at the start of this process with the Rajan's graph.
- 9)** If you have questions or need further assistance, contact tech support.
