

Going Keyless/Enabling Softkey – Win & Mac

March 2005

Very important notes – read carefully before you enable the softkey/keyless feature:

- Once you enable the keyless feature, the key becomes locked to a serial number of your hard drive and cannot be used on another computer unless it is un-locked. If, for any reason, you are getting the computer serviced, going to reformat the drive or even load a KHA upgrade you must UNLOCK the key first. Failing to unlock the key could result in the key needing to be sent back to us to be “un-locked” as well as paying an “un-lock cpd” charge.
- If you have both MacRepertory & ReferenceWorks programs, please set the Softkey in MacRepertory first. Ensure ONLY MacRepertory is open. Do NOT have ReferenceWorks open while enabling softkey in MR.
- Also, please note that you must look after the key once you have locked the computer. If you lose the key there will be a charge to unlock the computer and receive a new key.

For MacRepertory

1. After installing the applications, open MacRepertory
2. In MacRepertory, go to Option menu/preferences. (**Version 5.7**) or File menu/Preferences (**version 6.0 or Higher**)
3. Click on "Use this computer only" and click OK
4. Shut down MacRepertory and remove the CPD (key)
5. Restart MacRepertory and it should open without the key.

For ReferenceWorks

1. Install ReferenceWorks
2. Go to File menu/Preferences
3. Click on "Use this computer only" and click OK
4. Shut down ReferenceWorks and remove the CPD (key)
5. Restart ReferenceWorks and it should open without the key

How to UNLOCK/Disable Keyless feature.

1. Please open your program. If you have both please ONLY open MacRepertory
2. Attach the key.
3. Go to File Menu (version 6.0 and higher) or Option Menu (version 5.7). Select Preferences. Click "Use Copy Protection Device only".
4. Click OK.
5. ReferenceWorks will also be unlocked
