

## WINDOWS MENU

The Windows menu allows you instant access to any MacRepertory window. By clicking on the window, or using the keyboard equivalents, it brings that window forward and makes the window active.

Remember you can only work in an active window.

Using this Menu option or the keyboard equivalents takes away the need to close a window. When you close windows needlessly, you can lose the window sizing. Losing window sizing can cause problems when you are looking for something.

These window choices are also the icons on the Icon Tool Palette.
